Table of Content:

Chapter 1 6

The Purpose and Goal of this Work 6

Why are we writing this book? 6

Lots of differences, lots of similarities 11

The need to share and impact 12

Challenges and obstacles 14

Beyond business, the origins of our motivations 17

Chapter 2 19

The rationale for non empiric, experience based research, as a methodology for leading and assessing organizational change 19

The Non empiric experience based research methodology - A personal view 19

The History of Qualitative Research 21

Types of Qualitative Research 26

Assumptions of the Qualitative - Constructivist Research 29

Action Research 35

Summary: Thoughts on our study and its linkage to the Qualitative – Constructivist paradigm. 38

Chapter 3 43

Safety, Risk Management, Quality improvement Models, Concepts and implementation. 43

Prologue – We are now at a different point 43

Major approaches to Risk Management 44

Safety, Risk Management, Quality Assurance , Similar goals, different approaches .. 49

The History of Risk Management 52

Pioneering implications of Risk Management 54

Major Milestones in the development of Risk Management Thinking. 55

What motivates Adopting Risk Management Attitudes and Behaviors 62

The implications of the current global financial crisis on Risk Management Thinking 66

Chapter 4 71

Aviation and Healthcare 71

Risk Management – From Aviation to Healthcare: A personal perspective 71

Pilots & Doctors 73

The Pilot 75

The Doctor 77

Aviation and Healthcare: A Comparison 79

Summary 89

Chapter 5 92

Transferring a model from one content world to another 92

Introduction 92

The rationale for transferring models 93

Choosing the right model, choosing the right organization 94

Establishing the organizational infrastructure for the adaptation of the model – Professionals and Consultants. 99

Resistance to Change and practices from other content worlds 106

Chapter 6.1 113
In search of a model with proven results 113

Chapter 6.2 120
The role of pioneering: What to do without a benchmark in the HealthCare industry? 120
Redefining the needed model: Proactive RM with proven results. 120
In case there is no model, is it wise to define one based on personal experience and organizational goals ? 123
Many buzzwords, lots of papers, lot of ideas, but no benchmarks, neither model that can exhibit proven results. 123
What about other industries that share some common specifications? 124
Enhancing Patient Safety and Reducing Errors in Health Care 127

Chapter 6.3 129
Good things happen by accident- Maccabi is introduced to Aviation 129
Eilat's - Experience and practical "know how" in search of opportunities for implementation. 129
Aviation has a proven model for accident prevention - Can it be implemented in other areas that share the criticality of errors outcomes -Healthcare? 129
The Rambam hospital encounter. 130
Eilat is introduced to Maccabi. 132
Maccabi: This is what we are looking for, finally. 133

Chapter 6.4 135
The initial stages of establishing the dialog with Maccabi 135
After the initial enthusiasm and the feeling of Eureka, proof is needed. 135
Trying to define the relationship: Professionalism and business 138

Chapter 6.5 139
The criticality of initial stages: about organizational politics versus enthusiasm of pioneers. 139
Managing the possible risks of establishing a Risk Management Department. 139
Who is responsible for managing the risks? 143
The Management has to be committed 145
The position of IMA (Israeli Medical Association) 146
The position of MCI (The Israeli leading Malpractice insurer) 147
The position of Israeli Ministry of Health 148
Establishing interfaces with the Legislation department and the Ombudsman. 149
Documented, Initial organizational decisions regarding the RMD 151
Summary. 155

Chapter 6.6* 156
Recruiting the right staff 156
First Assignments – the criticality of assigning the right people to lead the change. ... 156
Assigning the Head of Risk Management Department and her Deputy 159
The deeds of the pioneers as the model for the followers. 161
Defining the right mixture of professions - Physicians and Nurses. 163
The ideal risk manager 164
No need to advertise - candidates are willing to join the RMD 167

The screening process – a family like decision making. 167
The training process – OJT (On the Job Training) 168
Sharing the experience - supervision, department meetings 169

Chapter 6.7 172
Establishing the Adverse Events Reporting System 172
Motivating physicians to report their own errors 172
Organizational decisions to provide administrative immunity 175
Why should a physician report? The direct and indirect benefits. 177
Statistics – How did the reporting statistics develop ? 181
What is reported and various origins and routes of reporting 188
How to classify reports and what is the importance of the classification? 191
Efforts to enhance reporting 193

Chapter 6.8 197
Producing value from adverse events. 197
What accounts for value? 197
The value of reporting - the core data for prevention efforts. 199
Changes in practice, changes in values - The age of corporization 203
What happens to an organization that establishes a RM operation 204
Can RM insights from one organization be transferred to another 207

Chapter 6.9 209
Developing the information system 209
The need for an information system 209
Issues of confidentiality of information 211
Basic modules and functionality 212
The flow of data into the Information System 215
What is the meaning of data gathered in the system? 216
The spectrum of usage 218
The Information System as a means of feedback for the risk managers. 219

Chapter 6.10* 222
Establishing working interfaces 222
Background 222
Like a stone falling in calm waters - Broadening the impact circles. 226
Looking for partners to produce critical mass 230
The insights from the organizational feedback loop as means of effectiveness. 232
Efforts to establish cooperation – Partial successes 236
Recommendations as means of establishing a working dialogue 238

Chapter 6.11 243
From investigating a single Adverse Event to studying phenomena 243
What can be learned and generalized from a single event? 243
How to set priorities, when everything seems urgent? 247
What is the meaning of an X number of events sharing similar characteristics? 256
A qualitative study, based on analysis of reported adverse events 257

Chapter 6.12 269
Lots of data without meaning – EMR as a source of meaningful data and means for implementing improved procedures. 269
Somewhere the organizational databases contain lots of meaningful information for improving Patient Safety..... 269
How EMR systems can be used to serve Risk Management needs. 272
Summary..... 275

Chapter 6.13 276
What about ROI (Return on Investment)? 276
Risk Management activity requires resources. 276
How much does Risk Management cost?..... 278
How to measure RM benefits in Healthcare ?..... 279
Measuring the financial benefits of RM in Healthcare 282
The results of risk management must be explicit and well communicated. 283
Developing measures for monitoring the effectiveness of RM activities. 285

Chapter 7* 288
The contribution of the Aviation Risk Management Model to Macabi's Risk Management Activities Summary and Discussion* 288
Prologue..... 288
Summing up ten years of collaboration: successes and failures. 297
Major insights derived from the implementation of the ARMM at Maccabi 308
Considering the original decision to adopt ARMM 312
Is it time to consider a new model? 314
Epilogue 317
Where are we now? 318
30 years after Captain's G.G. accident 319
What is it all about? 320

Acronyms 322
